

axios.get(backendAPI)  
axios.post(backendAPI, req.body)  
axios.put(backendAPI, req.body)  
axios.delete(backendAPI)

1. npx create-react-app client  
cd client
2. npm i axios react-router-dom@5

```
app.js
<BrowserRouter>
<Switch>
<Route path="/">
</BrowserRouter>
```

1. create server folder
2. inside server folder
  - controllers
    - \* demo.controller.js
  - config
    - \* mongoose.config.js
  - models
    - \* demo.model.js
  - routes
    - \* demo.routes.js
  - \* server.js
3. npm init -y
4. npm i mongoose express cors
